

## SCRIPT

## VISUAL DESCRIPTION

1

Companies use cloud services for data storage, but they are far from being the safest option.

Representation of cloud services...employees are frustrated as their computers are hacked

2

Centralized location and third-party access often lead to data breaches and exposure of sensitive information.

Files are stolen and systems are shutdown, maybe show the world where lights go dark maybe warning signs instead or other way to show error rather than lights going out

3

As a result, billions of dollars are lost each year due to shutdowns and cyber-attacks.

Files are pictured in different locations on the 3d representation of the world

4

Calibur enables decentralized storage and distribution of files, eliminating third-party access.

Files are pictured in different locations on the 3d representation of the world.

5

It collects and encrypts files, uploading them via the blockchain.

Representation of Calibur as a funnel connecting users with their files, Describe Calibur as a service that, without gaining access or liability of files, connect them with the owner or recipient.

6

1. User uploads the files, Calibur creates a smart contract
2. Files are immediately multi encrypted and segmented into different parts to be sent out to hosts
3. We keep track of data locations for fast and easy access

Grid with the files being sorted into different folders and users finding needed files and then swiftly downloading them make sure this part shows that it is software similar to google drive or similar. Also make sure to get the encryption part in here. One part of the video should describe the ctual process: Contracts are created, money signs go to people who host the files on the blockchain.

7

We pioneer voice and video calls using this technology. The internal messaging app ensures that all correspondence is encrypted and lightning-fast.

Icons of meeting, calls on the blockchain environment. Messages appear, and then are hidden with an encryption process

8

Protect your files from data leaks, third-party liability and unforeseen damages with encrypted data stored on the blockchain.

Workers start using Calibur.

9

We provide:  
Secure storage with easy navigation and fast transfer times.  
Internal Messaging, Voice & Video chat, and call capabilities.  
Intuitive tools for efficient administration
